UNITED POWER GROUP

THE UGP ENERGY SAVINGS CHECKLIST

Brought to you by UPG - Helping businesses save an average of 27% on energy bills.

INTRODUCTION

Running a business is tough enough without rising energy costs eating into your margins. Whether you're in an office, warehouse, or retail space, energy efficiency doesn't have to mean expensive upgrades or confusing audits. Sometimes, small shifts in awareness and smart contract choices can lead to big savings.

This checklist will walk you through practical steps you can take today — and strategic moves to future-proof your energy costs.

ENERGY HEALTH CHECK

An energy efficiency audit identifies areas where you can reduce usage, from upgrading equipment to optimising lighting and heating systems. Reducing consumption means your business becomes less impacted by rising energy charges overall.

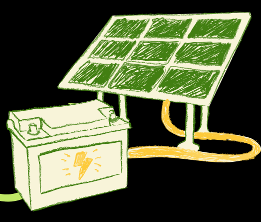
SWITCH TO A BETTER TARIFF

Review your current energy contract. A competitive tariff or fixed-rate deal could offer protection against rising standing charges in the future. Speak to your supplier or consider switching to another that offers better terms.

USE SMART METERING & MONITORING

Smart meters and advanced energy monitoring systems give you a clear picture of your energy usage patterns. By identifying peak usage times, you can make adjustments to cut consumption and reduce overall costs.

ADVANCED OPTIONS FOR YOUR BUSINESS



INVEST IN RENEWABLE ENERGY

Installing on-site renewable energy solutions like solar PV can help you generate your own power, reducing your reliance on the grid and the associated standing charges. Battery storage systems can further enhance these savings by storing excess energy for later use.

JOIN DEMAND-SIDE RESPONSE (DRS) SCHEMES

By joining a demand-side response programme, your business can get paid for reducing energy use during peak times, helping the grid stay balanced and earning revenue to offset rising standing charges.

LONG TERM ENERGY STRATEGY

Smart businesses aren't just looking to cut costs today they're planning for tomorrow. A long-term energy strategy means reviewing your contracts regularly, exploring renewable options like solar or battery storage, and using technology to track and manage your consumption over time.

WHY SWITCHING WITH UPG IS THE SMART WAY

- 27% AVERAGE SAVING FOR OUR CUSTOMERS
- ACCESS TO EXCLUSIVE RATES FROM OVER 15 ENERGY SUPPLIERS
- ZERO DISRUPTION, ZERO HASSLE — WE HANDLE EVERYTHING
- NO FEE — YOU STAY IN FULL CONTROL, AND IT COSTS YOU NOTHING
